DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-3 and 6-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Semaan et al. (US 7,016,312).

Regarding claims 1, 8 and 14: Semaan et al. discloses a feature based configuration profiles and alarm provisioning for sonnet networks comprising providing to a user a predefined alarm template having a plurality of alarm profiles for a facility type of a facility instantiation of the network element, each of the alarm profiles defining a reporting state for each of a plurality of alarm types; and selecting one of the alarm profiles for the instantiation of the facility type in the network element (col. 4, lines 22-56; col. 5, lines 4-35).

Regarding claims 2, 9, 15 and 17: Semaan et al. discloses editing the reporting state of at least one of the alarm types in the selected alarm profile (col. 5, lines 35-38; col. 6, lines 41-47).

Regarding claims 3, 6 and 10: Semaan et al. discloses a default alarm values are typically not allowed to be changed by the user (col. 5, lines 15-17).

Regarding claims 7, 12 and 13: See claims 2 and 3 above.

Regarding claims 11 and 16: Semaan et al. discloses the profiles for one of the predefined templates defines a threshold value for each of a plurality of performance parameters (col. 7, lines 58-61).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Semaan et al. (Us 7,016,312).

Regarding claims 4 and 5: Semaan et al. does not disclose the alarm profiles is enabled or inhibited; however, these features are merely a matter of programming preferences. Since Semaan et al. disclose the inventive steps of alarm provisioning above, one of ordinary skill in the art would recognize that a system may be programmed base on one's preferences.
